### NeuralMetrics Receives InsurTech100 2025 Award

**NEW YORK, October 2, 2025** — [NeuralMetrics](https://www.neuralmetrics.ai), a leader in trustworthy agentic AI for commercial insurance underwriting and premium audit management, today announced its selection by FinTech Global as an [InsurTech100 2025](#) award recipient, honoring the most innovative Insurtech companies worldwide. This marks the third time NeuralMetrics has received the award, reaffirming its ongoing dedication to enhancing critical insurance workflows with self-learning, reasoning AI technology.

The InsurTech100 selection panel of experts evaluated more than 2,100 companies this year, noting that award recipients are “shaping the future of insurance and redefining the way technology drives efficiency — creating new opportunities in key areas such as underwriting, pricing, distribution, and customer experience.”

NeuralMetrics features agentic AI assistants — ARKUS for risk analysis, GIA Lite for appetite alignment, GIA for program eligibility, and CHRIS for premium audit. These role-based AI coworkers can instantly access publicly available risk intelligence and classification data. The AI assistants ingest company guidelines and a range of fully verifiable data sources to streamline commercial underwriting and premium audit workflows. Insurer and program administrator/MGA business experts can train each AI assistant for in-context learning and transparent, accountable decision-making. NeuralMetrics AI solutions increase capacity, reinforce underwriting best practices, sharpen pricing, accelerate premium audit cycles, and elevate policyholder service.

“Being named an InsurTech100 award recipient again highlights our team’s efforts in applying advanced AI to improve commercial underwriting and premium audit processes,” said Prakash Vasant, CEO of NeuralMetrics. “As agentic AI, large language models, and machine learning develop further, our flexible AI assistants and data platform combine accuracy, speed, and transparency in risk assessment with human oversight for reliability and trust in AI-supported decision making by insurers and MGAs.”

#### About NeuralMetrics

NeuralMetrics ([www.neuralmetrics.ai](https://www.neuralmetrics.ai)) offers transparent, auditable agentic AI for regulated industries, automating workflows such as commercial insurance underwriting and premium audit management. The company’s AI assistants utilize in-context learning, role-based reasoning, and multi-phase verification to adapt without retraining and support real-time enterprise decision making. Data lineage and zero-PII principles make all NeuralMetrics AI actions verifiable, trustworthy, and standards-compliant. Businesses see increased capacity, precision, and efficiency — enabling smarter, agile operations at scale with built-in oversight.
